ABSTRACTED-PUB-NO: JP 05269920 A

BASIC-ABSTRACT:

The resin-coated steel sheet has a polyester resin film at least on the surface which faces inside of container. The polyester resin film has a thermal shrinkage stress of lower than 30 gf/mm<sup>2</sup> in all planar directions and

the  
outermost layer of it has a surface orientation coefficient of higher  
than  
0.02.

A steel sheet is heated to 180 to 240 deg.C and a biaxially oriented  
polyester  
film which has a thermal shrinkage stress of lower than 300 gf/mm2 in  
all  
planar directions and forms an outermost layer having a surface  
orientation  
coefft. of higher than 0.5 is laminated by pressing on the surface of  
the steel  
sheet which faces inside of container and the laminated steel sheet  
is quenched  
to a temp. below glass transition point of the polyester film within  
20 seconds  
after press bonding. The polyester resin film has a thickness of 5-  
50, pref.  
10 to 30 microns.

ADVANTAGE - The polyester resin-coated steel sheet has good  
processability and  
good heat resistance and shows strong adhesion of resin film. It  
produces  
drawn can with high corrosion resistance after packing.
